

Moisture Minder®

Energy Efficient Automatic Drain

Zero loss energy efficient drain rated for up to 30HP

- Automatic; operates each time compressor cycles
- Requires **no** electricity
- Saves money; no additional wiring required
- Standard valve rated at 300psi: optional to 600psi
- Stainless steel & anodized aluminum construction
- Valve operates without pressure drop in air system
- Easy installation; unlimited mounting options
- Long Life; may be used with synthetic oils

U.S. Patents:

#3,282,293

#3,254,805

#3,489,246

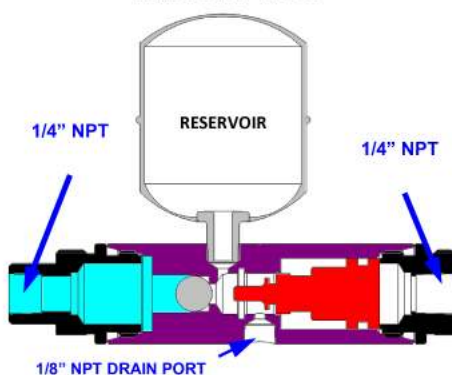

P/N 152-0000

Unlimited Applications: HVAC, dental, medical, handicap accessible doors, beverage compressors and fire sprinkler systems and many more!

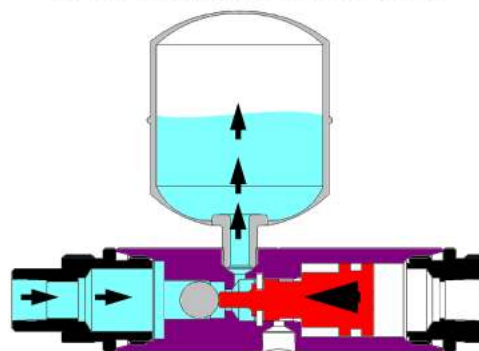

How it works:

VALVE AT REST

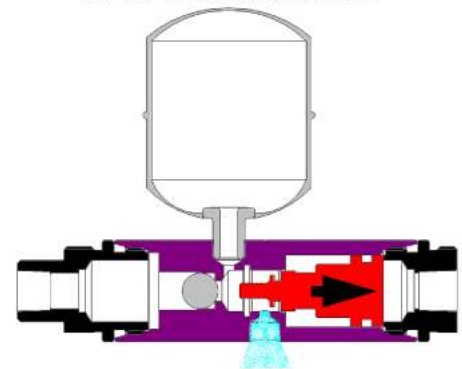

Condensation enters left hand or water inlet of valve.

PILOT SIGNAL FROM UNLOADER

Pilot signal causes piston to shift, closing off the drain port. As piston continues to move it will pin up the stainless ball check allowing condensate to be forced up into the external reservoir creating a discharge pressure.

PILOT SIGNAL RELIEVED

When pilot signal is relieved, piston returns to home position. The ball check closes preventing zero pressure loss in system. The drain port opens and stored condensate is ejected from the drain port.
